

Pricing Table 2024 - Aagon GmbH

ACMP ACMP Suite

All ACMP modules

The **ACMP Individual Suite** allows customers to combine the solutions they require to create their own personal suite. The **ACMP Individual Suite** must always consist of **ACMP Core** and at least TWO additional solutions. All solutions combined in the suite must be licensed with the same number of licenses.

- The following solutions can be combined in the suite.
- ACMP Core ((must always be included in the suite))
 - ACMP Desktop Automation
 - ACMP AutoMATE
 - ACMP License management
 - ACMP Complete Aagon Windows Update Management
 - ACMP Security Detective
 - ACMP OSD (OS Deployment)
 - ACMP Asset Management
 - ACMP Contacts Adapter

Article	Medium	Language	Price
ACMP Individual Suite (additional maintenance agreement)	per client	German/ English	0,00 €

ACMP Core

The basis for all further ACMP modules

The **ACMP Core** module contains all the basic modules and server components required to use ACMP (ACMP server service, distributed file repositories and the Active Update functionality).

The module includes the following components:

- ACMP Inventory: This provides the foundation and enables Windows/Linux/OSX clients and servers to be inventoried accurately and reliably using extended scan functionalities. In addition, this allows you to analyze, filter, sort and group your data directly in the data grid, providing you with all the relevant information.
- ACMP Reporting: Fully integrated report engine which gives your data an appealing look and creates structured tables and understandable diagrams using simple inventory data and figures.
- ACMP Contract and Document Management: Contracts and electronic documents can be recorded and linked as well as used in other modules.
- ACMP Kiosk: The self-service platform, which can be filled with additional modules, is already included in the **ACMP Core**
- ACMP Gateway: Provides a secure connection between the ACMP server and agents over the Internet. ACMP Gateway checks whether an agent with a valid certificate logs in and then forwards the data stream to the ACMP server.
- ACMP Console: Allows the centralized administration and management of ACMP. All tasks can be executed and monitored within one single console.

Article	Number of clients	Medium	Language	Purchase		Subscription*

ACMP Asset Management

Manage all fixed and tangible assets

A workstation is more than just a PC. With **ACMP Asset Management (ASM)** you can manage your IT assets, as well as all other assets your workstations consist of. Record and manage all components and assets in your organization including contract, maintenance and purchase data. User-friendly and flexible queries and reports provide you with a transparent and precise evaluation of your data at all times.

- Extensive management of all tangible assets
- Freely definable, hierarchical asset types/templates
- Import/export of inventory data
- Contract data management incl. document management
- Cost recording with purchase/lease/rent/ancillary costs and much more
- Complete contact management (manufacturers/suppliers/service partners/users)
- Flexible location/department/cost center management
- Rental management
- Full integration in client management and helpdesk
- Freely definable, own fields in any number with format specification
- Included mobile app for recording your tangible and fixed assets

ACMP Asset Management ALP G	5000+	per client	German/ English	excl.	13,48 €	incl.	8,65 €

ACMP License Management

Keep all aspects of software license management under control

ACMP License Management is the conscientious administration of proprietary software in a company. Software licenses are considered in a legal- as well as cost-specific perspective, and their use is coordinated across the company.

With **ACMP License Management**, you can implement all aspects of reliable license management within your company.

It provides you with a powerful tool which not only considers different license types, but also is able to map detailed dependencies between different manufacturers and their sophisticated license models.

The ease of use of the single ACMP Console, is a real asset for administrators. Automatic reporting options provide a comprehensive or detailed overview, depending on the situation.

- Company-wide cost reduction
- Link inventoried software to known products via ACMP DNA
- Comply with Windows Server CAL and RDS CAL
- User and device CAL compliance
- Record contracts, maintenance agreements and all associated licenses
- Compliance-Check
- Comprehensive control over all aspects of license management (chaining, allocation, factor calculation)
- Simple control of up- and downgrade, as well as secondary usage rights

ACMP DNA

Identify undetected software

Software catalog for clear, automatic recognition of currently more than 17,000 manufacturers and over 700,000 software entries including all aspects like version, edition, language, function, and much more.

ACMP DNA is the perfect complement to our SAM solution (Software Asset Management) which not only automatically identifies the software used in the company in a clear and reliable manner, but also allows the exact mapping of upgrade and downgrade permissions. **ACMP DNA** will be automatically updated during the contract period through monthly automatic data synchronization (*1) with the latest recognition data.

The minimum term lasts for one year. It is automatically renewed for one (1) year on an annual basis, unless **ACMP DNA** will be terminated three (3) months prior to expiration. Cancellation must take place in writing.

*1 = Internet access required for data synchronization.

Unless otherwise stated, the number of licenses specified in this item represents your total number of **ACMP DNA** licenses and replaces any existing, older licenses as of the specified contract start date.

Article	Number of clients	Medium	Language	Purchase		Subscription*

ACMP DNA Per Client And Year, 1 Year Term		per client	German/ English			incl.	4,00 €

ACMP Desktop Automation

Distribute software and automate routine tasks

ACMP Desktop Automation is the basic module for reliable client management. It enables nearly all administrative tasks, on server and client systems, to be managed without any major programming knowledge.

- Automation of routine tasks
- Flexible software distribution
- patch management
- Integrated form editor
- Dynamic client grouping, e.g. for process automation
- Cross-network hardware inventory incl. creation of own data fields
- Intuitive packaging language for implementing the tasks mentioned above (programming via drag & drop)
- Report engine for visualizing the collected data
- Distributed file repositories across locations

ACMP Desktop Automation ALP G	5000+	per client	German/ English	excl.	19,51 €	incl.	12,52 €

Complete Aagon Windows Update Management

Make WSUS redundant

With **ACMP CAWUM** (Complete Aagon Windows Update Management), all Microsoft patches are available for easy and, if desired, automatic distribution in your network.

Replace your WSUS server and take advantage of the flexible file repository architecture, best-practice deployment circles, and highly efficient and unique scanning engine, which only deploys patches to clients that are truly needed and approved.

Automate your entire update process, making it planable, transparent, customizable, and always reportable.

- Complete avoidance of Windows Server Update Services (WSUS)
- Daily updates for your IT
- Saves on server licenses and update management fees
- Intuitive user interface
- Automation with three distribution rings
- Fine-grain control of which patches to synchronize, in which languages, to which file repositories
- Saves time and bandwidth because **CAWUM** determines in advance which patches a client needs and distributes only those - not the complete update file comprising several gigabytes
- Can be used independently and without ACMP Desktop Automation

ACMP Managed Software

Automate third-party patch management

Readily available standard software for automatic distribution including continuous updating.

Your benefits:

- Swift availability of software updates
- Quality-assured packages for Windows 7, 8, 10 and 11 (32/64 bit)
- All packages are suitable for installation, uninstallation and reinstallation
- Detailed description of each software package
- Supported languages include German and English
- Installation parameters can be added to the installation package using forms
- Automatic distribution/update according to recognized best practice procedures (if desired)

ACMP OS Deployment

Company-wide rollout of operating systems

ACMP OS Deployment is the complete solution to automate the rollout of Microsoft operating systems within your network.

Thanks to its simple, dialog-driven interface, you can build a standardized operating system environment with ease.

- Full Windows Server 2022 support
- Full Windows 11 support
- Full Windows 10 support
- Use BIOS/(U)EFI with/without Secure Boot
- Unattended as well as OS Deployment via image.
- Rollout of operating system and third party software directly within ACMP - No need setting up a WDS server including WAIK (WADK)
- Advanced customization without a dedicated WDS server. Only the WAIK (WADK) is required on the admin PC
- Driver wizard for easy integration of manufacturer specific drivers

ACMP Vulnerability Management

Detect backdoors and protect your own IT

ACMP Vulnerability Management offers a unique combination of automatic scanning and, if desired, automatic response to any vulnerabilities found. As with many other functionalities within ACMP, the security scan can be scheduled to avoid interference with day to day tasks. Your employees remain productive throughout the process.

Details on the security status of all clients can be easily and comfortably viewed at a glance directly in the central dashboard of the ACMP Console. **ACMP Vulnerability Management** provides a clear and concise overview of the most dangerous vulnerabilities and the affected systems in detail. The view of the data is fully customizable and can be sorted, grouped and filtered to suit individual needs.

Directly from the dashboard you can drill down at any point in time, to view detailed information about the given results.

For your convenience, all results are also available via queries and dynamic groups (containers) for further evaluation.

ACMP Defender Management

Use Microsoft Defender Antivirus at your company

ACMP Defender Management allows a centralized Microsoft Defender Management of all your clients and servers within a single interface.

Features include:

- Centralized management - Antivirus management through the ACMP Console
- Easier configuration than Active Directory
- Centralized quarantine management
- Interaction with other ACMP modules to utilize the available data
- Cost savings - no additional antivirus solution required
- Already integrated into the operating system - great performance and simple to deploy
- Dashboards and reports available to support (security) audits and gain further insights

Article	Number of clients	Medium	Language	Purchase		Subscription*

ACMP BitLocker Management

Manage data encryption centrally

ACMP BitLocker Management lets you manage the Microsoft BitLocker functionality of all your clients and servers in a single interface.

Features include:

- Centralized management of disk encryption through the ACMP console
- ACMP Key Vault - centrally collect all BitLocker keys (optionally sync with the Active Directory)
- Complete visibility into the status of BitLocker encryption
- Already integrated into the operating system - easy to deploy and high performance
- Interacts with other ACMP modules to utilize the available data
- Dashboards and reports available to support (security) audits and gain further insights

ACMP Helpdesk

Enable agile IT support

The **ACMP Helpdesk** reliably manages all support requests within ACMP and helps you to keep track of all related activities.

- Centralized incident and knowledge management
- Various ACMP - specific actions can be controlled directly within the ticket
- Direct access to clients and assets already inventoried in ACMP (cross-module-communication)
- Automatic ticket generation
- Extensive rules engine
- User definable escalation levels
- Web interface for end user and administrator

CTI

Computer Telephony Integration

ACMP HD CTI:

- Connects the **ACMP Helpdesk** contacts with the **ACMP Softphone**
- Connection via TAPI interface
- Overview of calls as well as open tickets of the called party or caller

Additional functions are

- Forward call
- Reject call
- Hold call

Attention different licensing: The licensing of the Helpdesk CTI module is based on the number of Helpdesk employees which require the CTI.

Article	Number of clients	Medium	Language	Purchase		Subscription*	
				Maintenance agreement	Price	Maintenance agreement	Price
ACMP Helpdesk CTI ALP A	1-4	per CTI Client	German/ English	excl.	341,46 €	incl.	219,10 €

ACMP Application Usage Tracking

Identify license usage and save costs

ACMP Application Usage Tracking (AUT) can monitor the usage of any application. This gives you a reliable way of finding out which programs are being used, which licenses can be saved, or how newly introduced software is being utilized while still being GDPR compliant.

- Detects software usage
- Easy to configure
- Helps optimize license costs
- Helps evaluate the adoption of new programs
- Can be activated on demand
- Complies with all privacy regulations

ACMP AUT supports all supported Microsoft operating systems.

Article	Number of clients	Medium	Language	Purchase		Subscription*

ACMP Intune Connector

Centrally manage mobile devices

The **ACMP Intune Connector** collects the data of the managed mobile devices within the cloud-based endpoint management solution Microsoft Intune, and sends the transformed data (Android and iOS) to ACMP. This allows you to include these mobile devices directly in the ACMP environment.

Use the following functions, among others:

- Centralized device management
- Inventory of endpoints like operating system, software/applications, hardware, etc.
- Remove configuration profiles and settings
- Reset mobile devices to factory defaults
- Remote Lock - lock the screen
- Ssync Device - re-synchronize mobile devices

The fully integrated management solution communicates via Aagon's Enterprise Service Bus (AESB), therefore the installation of the AESB may require additional services. **The ACMP Intune Connector is licensed based on the Intune devices to be imported.**

Important note: The purchase of the license does not include a configured and functional Microsoft Intune license.

Article	Number of Intune Device	Medium	Language	Purchase		Subscription*	
				Maintenance agreement	Price	Maintenance agreement	Price
ACMP Intune Connector ALP A	25-99	per Intune Device	German/ English	excl.	8,00 €	incl.	5,13 €

ACMP Intune Connector ALP F	2500-4999	per Intune Device	German/ English	excl.	4,64 €	incl.	2,98 €
ACMP Intune Connector ALP G	5000+	per Intune Device	German/ English	excl.	4,32 €	incl.	2,77 €

Mobile Devices Connector

Fully integrated solution for centralized management of mobile devices within the ACMP Console (synchronized or imported via AESB).

For operation you also need Aagon AESB with the corresponding AESB products for your MDM solution(s).

The **Mobile Devices Connector** allows to automatically import inventory data of mobile devices (iOS, Android, etc.) from your MDM solution into the ACMP Console. This allows to include all your mobile devices within your general infrastructure overview.

The installation of AESB and the required AESB products may require additional services.

Article	Number of clients	Medium	Language	Purchase		Subscription*

Consulting day (remote)	per day	n/a	1250,00 €
Expenses	per day	n/a	199,00 €

ACMP maintenance agreement (annual)

The annual maintenance fees are based on the list price of the licensed Aagon products purchased by the customer. The maintenance agreement includes the following key benefits:

Unlimited, free telephone support during normal business hours (Mon.-Fri., 8:00 to 16:30 CET).

- All major and minor releases of licensed Aagon products purchased under this agreement are available free of charge.
- Round-the-clock free access to our customer online community and various resources to download
- Round-the-clock ticket acceptance via email and website

The term of the agreement is 12 months. It is automatically extended annually by one (1) year unless it is terminated three (3) months before the expiry date. Notice of termination must be given in writing.

Of course, longer terms are possible, which will reduce the annual cost accordingly. Subsequent automatic renewals will be at the stated price for one year.

The fees for the maintenance agreement with a longer term are

- for a term of 24 months only 20 % of the license list price net annually
- for a term of 36 months only 18 % of the license list price net annually

Article	Price
ACMP maintenance agreement (annual)	23 % of the list price

Upgrade

Upgrade of an existing license without maintenance = 50% EVK (does not apply to ACMP DNA)

Education, government & health-care conditions

Education, government & health-care conditions generally receive a 30% discount on licenses and maintenance. Please note: We cannot grant education, government & health-care conditions for ACMP DNA.

*Subscription

ACMP subscription licenses are also available:

The term of subscription licenses is generally set to one (1) year. It is then automatically renewed annually for another one (1) year unless the ACMP module is terminated three (3) months prior to expiration. Termination must be in writing. Of course, longer contract periods are also possible, which will reduce the annual costs accordingly. The subsequent automatic renewal will be at the stated price for one year.

Fees for longer terms:

For a 24-month term, you receive a 10% discount on the annual price during the commitment period.

For a 36-month term, you will receive a 17% discount off the annual price during the commitment period.

**Node-locked license

The **ACMP BitLocker Management** module can also be used as a subscription node-locked license (a node-locked license is recommended if the customer wants to bind the software to specific computers).

The term is set to one (1) year. It is then automatically renewed annually for another one (1) year, unless the ACMP module is terminated three (3) months prior expiration. Termination must be in writing. Of course, longer contract periods are also possible, which will reduce the annual costs accordingly. The subsequent automatic renewal will be at the stated price for one year.

Fees for longer terms:

For a 24-month term, you receive a 10% discount on the annual price during the commitment period.

For a 36-month term, you will receive a 17% discount off the annual price during the commitment period.
